

BENJAMIN PLACE CLEVEDON, AUCKLAND

BOWERS BROTHERS BRICK VENEERS

PROJECT

Substantial, high-end Residential build that had a brief to architect to deliver an attractive home that blended in with the semi rural surroundings and was in keeping with a blend of various other home styles, including barn-like dwellings.

DESIGN

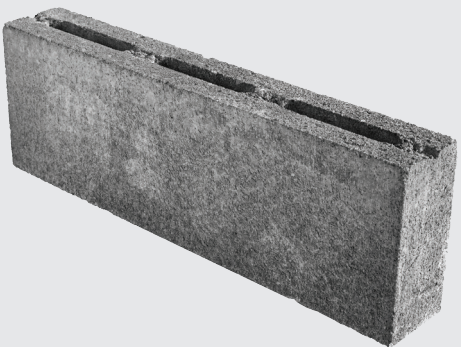

Stroud Homes Auckland South and Bowers Brothers worked through Carters East Tamaki Branch to deliver consistently aesthetically pleasing bricks at a competitive price and in a timely manner.

INSTALLATION

Clients are very happy with the achieved result delivered by Stroud Homes Auckland South using Bowers Concrete Bricks.

The Bowers Masonry Brick Veneer System provided the following benefits to the project:

- A large family home, comfortable and cool in summer, warm in winter.
- Brick cladding with cavity construction gives weather-tightness-peace of mind to the owners.
- Easy maintenance with just a light pressure clean of brickwork every 3-4 years.
- Concrete bricks are made locally in New Zealand, meaning no delays in supply and a very cost-effective price.
