

# POINT CHEVALIER RESIDENCE

## H10.01 Masonry Brick Veneers

### PROJECT

The brief for this existing property was a complete make-over of both the house and the gardens. Changing the exterior cladding and an interior wall to encompass a clean, contemporary brick veneer finish. This application of brick was also replicated around the outdoor pool and garden landscaping.

### DESIGN

To add a more visual impact a running-bond application was chosen for installation of the exterior cladding and interior masonry wall. To compliment the existing landscape and surrounding properties the H10.01 brick veneers were manufactured in a premium made to order colour in ICE.

### INSTALLATION

Installation was made easier with the convenience of the colour matched mortar that created a seamless transition between bricks. The overall project once completed resembled a new build not a renovation. The client was "over the moon" with the final result.

### The H10.01 Masonry Brick Veneer System provided the following benefits to the project:

- ✔ The striking ICE hue of the brick veneer brings a clean, timeless look to this impressive property.
- ✔ Continuity using the brick both on the exterior and interior of the home unites the aesthetic appeal of the brick veneer.
- ✔ The profile of the H10.01 brick veneer being a long profile adds a sophisticated, contemporary appearance.
